EDUCATION

University of Southern California

Los Angeles, CA

Master of Science in Computer Science | Graduated May 2026

- Relevant coursework: Analysis of Algorithms, Database management, Applied Natural Language Processing, Information Retrieval, Geospatial Information Management

Fr.C.Rodrigues Institute of Technology

Mumbai, India

Bachelor of Engineering in Information Technology | Graduated June 2024

- Relevant coursework: Operating Systems, Computer Networks, Artificial Intelligence, Big Data, Cloud Computing

TECHNICAL SKILLS

Languages: Python, Typescript, Javascript, C#, HTML, CSS, SQL

Frameworks: React, Node, Express, Tailwind CSS, React Native, Expo, FastAPI, ASP.NET Core, REST APIs, Minimal API

Databases: PostgreSQL, MongoDB, Supabase, Firebase, SQL Server (T-SQL), Redis

ML/AI : PyTorch, LangChain, RAG, CVAE/Generative Modeling, BioBERT, Pandas, Numpy

Cloud & Tools: AWS (EC2, S3, CloudWatch), GCP, Git, Docker, Linux/Unix, Shell Scripting

Testing: Vitest, Supertest, React Testing Library, Integration Testing

EXPERIENCE

Software Engineer Intern

Aug 2026 – Present

Box Technology Group

Los Angeles, CA

- Owned transaction and financial ledger systems for an AI-powered commerce platform, designing a concurrency-safe multi-source reconciliation pipeline that resolves overlapping purchase signals into a single authoritative record
- Engineered a replay-safe rewards ledger with **idempotent posting**, eliminating duplicate payouts across all client surfaces
- Led database migration and recovery for a 5-engineer team on a large MongoDB Atlas environment

Software Developer

Sept 2024 – May 2026

USC Institute for Creative Technologies

Los Angeles, CA

- Engineered full-stack internal platforms using C# ASP.NET Core Razor Pages and Minimal API endpoints, integrating dependency injection for structured and scalable delivery across internal platforms
- Architected normalized SQL Server schemas, stored procedures, and EF Core data access layers, leveraging LINQ query optimization to accelerate dynamic reporting workflows and reduce Excel report generation time by 40%
- Deployed real-time dashboards to production, implementing end-to-end data validation and monitoring at live environment

Data Engineer Intern

June 2025 – Aug 2025

Meta Platforms

Burlingame, CA

- Built and productionized 4 large-scale data pipelines on Meta's internal infrastructure, processing billions of records daily through distributed ingestion to drive real-time analytics and AI readiness dashboards across internal platform operations
- Developed Python-based data validation frameworks enforcing schema integrity, null-safety, and idempotency guarantees
- Optimized DAG-based data workflows through parallel execution with solutions adopted by 3+ cross-functional teams

PROJECTS

Taal - Workshop Booking Platform | React Native, Expo, Supabase, FastAPI, PostgreSQL

Sep 2026 – Present

- Building Taal, a two-sided dance workshop platform connecting dancers to instructors via AI-powered discovery and matching, Dance Skill Fingerprint radar, real-time live streaming with chat via Websocket, and geolocation map discovery
- Engineered AI ranking engine scoring workshops against a dancer's 5-axis skill profile, and role-based auth for users
- Architected role-based navigation, split-panel map discovery, and end-to-end booking flows across a unified codebase

Budget Buddy | MongoDB, Express, React, Node, LangChain, Vitest, Supertest

Jan 2026 – Present

- Developed a full-stack personal finance platform with budget and expense tracking and OCR-driven receipt ingestion, converting photographed receipts into structured, categorized expense records scored against user budgets
- Integrated a LangChain pipeline over users' live transaction data, grounding AI financial insights in actual spending
- Built a 39-test Vitest suite with integration tests running against an in-memory MongoDB through the real Express stack

FixIt - E-Learning Platform | React, Typescript, Node, Express, Tailwind CSS, Supabase, Groq

May 2026 – Present

- Built an e-learning platform featuring interactive coding sandboxes, in-browser debugging challenges, and adaptive quizzes, delivering engaging hands-on programming practice
- Engineered a schema-validated Zod pipeline enforcing 12+ structured fields, and resolved a bug across 2 OAuth providers
- Iterated on the debugging flow from user feedback, adding concept explanations before the fix step to improve comprehension

Gene Semantic Bridge | Pytorch, CVAE, BioBert, scRNA-seq, Generative Modeling

Jan 2026 – May 2026

- Designed a generative AI model integrating language-model embeddings to predict unseen genetic perturbation
- Engineered a unified architecture for single and combinatorial perturbation modeling with improved generalization
- Evaluated on Norman and Replogue OOD benchmarks, achieving R-squared value of 0.996, outperforming baseline models
